

DESCRIPTION:

This hands-on session will walk you through the high level configuration options for COMMANDtrack for COMMANDseries covering the most common feature settings used by dispatch operations. Those who manage and/or administer COMMANDtrack will benefit from this walk through of the various configuration settings available and learn how different settings affect the user's experience.

NOTES:

This class content is designed for non-optimized COMMANDconcrete Version 2 users. While some of the information is the same, it is not specifically designed for those that are running COMMANDoptimize.
